

Seminar Series & Site Tour

Bowden Urban Village – working towards a Green Star Community rating through integrated water cycle management

Venue: Information & Sales Centre, 18 Park Terrace, Bowden

Date: Wednesday, 19 October 2016

Registration: 3:00pm

Time: 3:30-5:30pm

Renewal SA have taken on the challenge of providing sustainable medium density residential infill development at the Bowden Urban Village. The development incorporates water sensitive urban design over a range of scales including use of treated stormwater within households, together with streetscape and precinct scale stormwater treatment solutions that integrate seamlessly with the urban landscape. These features are part of their strategy to achieve a Green Star Community. Join us to hear about this innovative project that is setting a new benchmark for how we regenerate our city.

Presenters

Andrew Bishop, Manager Sustainability, Project Delivery, Renewal SA

Steven Porch, Project Manager Delivery, Renewal SA

Biographies

Andrew Bishop, Manager Sustainability, Project Delivery, Renewal SA

Andrew has over 21 years of experience in the residential property development industry, including delivery of major land development projects. He has experience in the creation of high quality, master planned, sustainable and community focused residential and commercial projects. He is a Green Star Accredited Professional with experience in accreditation of 5 Star Green Star buildings in the Bowden Development.

Steven Porch, Project Manager Delivery, Renewal SA

Steven has more than 13 years of design, construction and project management experience in the delivery of infrastructure, land development, and streetscape projects in both private and public sector settings. With a background in civil engineering he currently manages the delivery program at the South Australian government's flagship Bowden project. The Bowden Development is delivering South Australia's first shared streets whilst fulfilling the Government's objectives of high quality inner city development, density and urban renewal.
